

"Investing in Africa's future"

COLLEGE OF HEALTH, AGRICULTURE AND NATURAL SCIENCES

NACP 304: PLANT PATHOLOGY

END OF SECOND SEMESTER FINAL EXAMINATIONS

APRIL 2022

LECTURER: W. MANYANGARIRWA

DURATION: 3 HRS

INSTRUCTIONS

- 1. Answer All Questions in Section A, and
- 2. Choose and Answer any two Questions in Section B.

SECTION A, ANSWER ALL QUESTIONS IN THIS SECTION

1.	a) Outline the different types of microscopes that are used in the diagnosis of the following disease causing agents;(i) fungal fruiting bodies, (ii) fungal spores, (iii) nematodes, (iv) bacterial cells are	
	(v) virus particles.	[10]
	b) Give a brief outline of the Koch's Postulates. Explain why it is not always pos fulfil all the requirements of the postulates.	sible to [10]
	c) Describe in detail a procedure that you used in the laboratory to test a soil sam the presence of nematodes.	ple for [10]
	d) Outline the role played by Plant Quarantine in the management of plant diseas national boundaries.	es across [10]

e) Briefly discuss the nematode species that affect tobacco and bananas. [10]

SECTION B ANSWER ANY TWO QUESTIONS

- 2. Insects in the Order Hemiptera are the major vectors of plant viruses. With the aid of relevant examples, give a comparative analysis of the differences between persistent transmission of plant viruses and non-persistent transmission of plant viruses. [25]
- 3. Outline the measures enunciated by the Fungicide Resistance Action Committee (FRAC) to slow down the development of fungicide resistance in fungi. [25]
- 4. Outline the role that man plays in plant disease epidemiology. [25]
- 5. As a soyabean breeder you have been asked to evaluate the levels of soyabean rust resistance in six soyabean cultivars namely; Tarnby, Gentofte, Lyngby, Taarstrup, Luft and Valby. All the requirements for growing the crop are given i.e. *ceteris paribus* conditions.

a) How would you generate data on the area under disease progress curves to evaluate and rank the varieties for their resistance? [16]

b) How would you determine the yield loss attributable to soyabean rust disease in the six cultivars? [9]
